HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Tissot's table of logarithms

(ca. 1880)

Denis Roegel

20 December 2011

This document is part of the LOCOMAT project:
<http://locomat.loria.fr>

1 Tissot

We know very little on S.-L. Tissot. The 3-page introduction to his table of “logarithms” states that he was *agent voyer* (road surveyor) in Mâcon (France). This introduction is dated 12 November 1884.

We also know that Tissot published a table of abscissas and ordinates in 1874, apparently in order to help for the drawing of roads [5].

2 Tissot’s table of logarithms

Tissot’s table of logarithms is in manuscript form and held at the library of the *Institut* in Paris (Ms 923). The manuscript was donated by the author.

The main table spans 1000 pages, each page having dimensions $w \times h = 17 \text{ cm} \times 35 \text{ cm}$. Each page gives the logarithms of 100 values.

2.1 Logarithms of numbers

It appears that Tissot gives the values of $v = b^n$ for $n = 1$ to 100000 and $b = 10^{\frac{1}{1000000}}$. For instance, for the value $n = 10001$, Tissot gives $v = 1.258955$, the correct value being 1.258954.

If we assume that the first column of Tissot’s table contains fractions of hundred thousands, the previous relation can also be read as $\log 1.258955 \approx 0.10001$. In other words, Tissot’s table is basically a table of antilogarithms. Tissot’s table is of course also reminiscent of Bürgi’s table [2]. Bürgi built a table of the values $10^8 \cdot b^{n/10}$ with $b = 1.0001$ and $1 \leq b^{n/10} \leq 10$. This connection, however, is certainly fortuitous.¹

Tissot did not explain how he computed the values of b^n , but it is likely that he computed some pivot values.

Existing tables of logarithms, such as Babbage’s [1], gave for instance the logarithms to seven places, so that he would have found

$$\log 66599 = 4.8234677 \tag{1}$$

$$\log 66600 = 4.8234742 \tag{2}$$

$$\log 66601 = 4.8234808 \tag{3}$$

A linear interpolation would then give

$$\log 66599.35 = 4.82347 \tag{4}$$

$$\log 66600.88 = 4.82348 \tag{5}$$

and the values on the left are approximations of the values of b^{82347} and b^{82348} :

$$b^{82347} = 6.659937 \tag{6}$$

$$b^{82348} = 6.660090 \tag{7}$$

Tissot may have used a combination of techniques in order to obtain a better accuracy.

¹Moreover, as we argue in our description of Bürgi’s table, Bürgi did not yet have a full understanding of logarithms.

2.2 Sines

Tissot's table contains a somewhat peculiar column giving angles, but whose entries are mostly empty. These entries are the sines of certain angles. More precisely, the first part of the angle column lists the angles α from $0^\circ 35'$ to $5^\circ 44'$, minute by minute, and they are put next to the number $100 \sin \alpha$. For instance, $1^\circ 21'$ is put next to 2.355976, on line 37217.

For α from $5^\circ 45'$ to 90° , the second part of the angle column should be used, and α is given next to $10 \sin \alpha$. For instance, $5^\circ 45'$ is given under 1.001890, on line 82

2.3 Proportional parts

A table of proportional parts is given on each page in order to facilitate interpolations. On the first page, the greatest difference of N in the last digit is 23, and this difference is divided in 100 parts. On the last page, the greatest difference is 230, and this difference is likewise divided in 100 parts. On the last page, interpolating the value corresponding to 99901.37, for instance, is done by adding the value for 99901 which is 9.977230 and the proportional part 85, so that in the end we have $9.977230 + 0.000085 = 9.977315$.

References

The following list covers the most important references² related to Tissot’s table. Not all items of this list are mentioned in the text, and the sources which have not been seen are marked so. We have added notes about the contents of the articles in certain cases.

- [1] Charles Babbage. *Tables of logarithms of the natural numbers from 1 to 108,000*. London: Mawman, 1827. [A complete reconstruction of the tables was made by D. Roegel in 2010 [3].]
- [2] Jost Bürgi. *Arithmetische und Geometrische Progress Tabulen, sambt gründlichem Unterricht, wie solche nützlich in allerley Rechnungen zugebrauchen, und verstanden werden sol.* Prague, 1620. [These tables were recomputed in 2010 by D. Roegel [4]]
- [3] Denis Roegel. A reconstruction of Charles Babbage’s table of logarithms (1827). Technical report, LORIA, Nancy, 2010. [This is a reconstruction of [1].]
- [4] Denis Roegel. Bürgi’s *Progress Tabulen* (1620): logarithmic tables without logarithms. Technical report, LORIA, Nancy, 2010. [This is a recalculation of the tables of [2].]
- [5] S.-L. Tissot. *Table d’abscisses et d’ordonnées pour le tracé des courbes de raccordement de degré en degré, destinée au service vicinal de Saône-et-Loire*. Mâcon: Émile Protat, 1874.

²**Note on the titles of the works:** Original titles come with many idiosyncrasies and features (line splitting, size, fonts, etc.) which can often not be reproduced in a list of references. It has therefore seemed pointless to capitalize works according to conventions which not only have no relation with the original work, but also do not restore the title entirely. In the following list of references, most title words (except in German) will therefore be left uncapitalized. The names of the authors have also been homogenized and initials expanded, as much as possible.

The reader should keep in mind that this list is not meant as a facsimile of the original works. The original style information could no doubt have been added as a note, but we have not done it here.
